

# A Dravidian decipherment of Indus script

S.K.Venkatesan  
CQRL Bits, Chennai

This publication is for feedback and further elucidation on the basic decipherment for larger community of enthusiast out there in the world. Important documents for understanding Indus script is the corpus created by Asko Parbola and [Iravadham Mahadevan's concordance](#) work (here on referred to as M77). We also need the [Dravidian Etymological Dictionary](#) (DED) by Burrow and Emeneau. Please download the two PDFs from Internet Archive and you should be ready. There are two excellent software versions of these PDFs: [Iravadham Mahadevan's concordance](#) maintained by Roja Muthiah Research Library and [Dravidian Etymological Dictionary](#) maintained by Digital South Asia Library of the Chicago University. Another rich source of conjectures and data is the great work of Bryan Wells: [The Archaeology and Epigraphy of Indus Writing, Archaeopress, 2025](#), who also has an excellent online database.

If you want to write documents with Indus signs then you need Asko Parbola's NFM Indus Script font. This document was written in that font, a lovely gift from MVB to me. Now on to the beautiful discovery of the decipherment.

The decipherment became possible with the arrival of the splendid work by MVB in Sasanam: M.V. பாஸ்கர் (Bhaskar), அன்றைய தலைப்பு செய்திகள் (Yesterday's headlines), சிந்துவெளி நாகரீக சிறப்பு வெளியீடு (Indus Valley Civilization Special Issue), கிருஷ்ணகிரி மாவட்ட வரலாற்று ஆய்வு மையம் (Krishnagiri District History Research Center), சாசனம் (Sasanam), 2025.

This laid down the map that lead to all the linkage between graphics and the text, building this beautiful journey of discovery enabled by M.V. Bhaskar, with whom I have been working for the past several years. My learning in art, Brahmi and Indus Script derived from his interactions.

Decipherment is a commutative diagram:

Of course, a lot of hard work and walking on three legs. We use M77 to denote Mahadevan's sign numbers, but the glyphs are provided by Asko Parbola's NFM Indus Script font.

## Skilled artistry of Indus script

At the core of Indus script lies the mastery of a skilled metallurgist (𑀲𑀺?). We will illustrate this with these few examples:

𑀲𑀺𑀲𑀺𑀲𑀺 = 𑀲𑀺𑀲𑀺𑀲𑀺 = vel-tiraḷ-nuraṇ-ūr = வேல்திரள்நுழனூர்

The semantic meaning being the town with tailors, jewellery and hunting professions.

𑀲𑀺𑀲𑀺𑀲𑀺 = 𑀲𑀺𑀲𑀺𑀲𑀺 = mu-iru-mel-per-ul = முவிரு மேல்பொருள்

The semantic meaning being the mighty great guardian of the township (elevated to kings and gods at later times).

## Some important townships

This is just indicative of the various kinds of townships and professions, and a deeper quantitative study is required to obtain their relative importance. What is interesting is that the last one is farmer's town, which doesn't count really as a town, but in Dravidian languages, the term "ūr" seems to cover what we call "village" also.

M77 Sign	Glyph	Syllable	DED	Description	Tamil

15	𑀲	uṛavūr	688	working, farming town	உழவூர்

## Numbers

Numbers are treated separately, but they are just like other glyphs, easily welded and affixed to other glyphs, producing a plethora of possibilities.

M77 Sign	Glyph	Syllable	DED	Description	Tamil
86	𑀲	mu-, mutal	4950	primary (see also sign 237)	முதல், -ல்

87		ra-, ir-, iru-	474, 481	two, great, eminence	ரண்டு, -இர், இரு-

95		nal-, -nāl, nalla-	2912	four, good	நல்-, நால்-, நல்ல-
96		-ai	2826	five	-ஐ
108		-ar	2485	six, river	ஆறு
110		eṟu-, -eṟu	910	seven, rise	ஏழு, எழு

#### Application of above phonemes

112		nalām, ñālam, munnal	2913	land, healthy, before	நலம், நாலம், முன்னால்
116		nallai, nellai	-	rice	நல்லை, நெல்லை

120		mu-munamum	-	three generations back	மும்முன்னோனும், மும்முன்னமும்
119		mu-munnor	-	two generations back	மும்முன்னோர்

## Clitics

Clitics provide sentence structure (the subject and the object). The default reading order is right to left, but before the clitic " (sign 99), the reading is left to right.

M77 No.	Glyph	DED	Description	Tamil
97	𑌐	-	-il, -da, -ta, -in	-ட, -டு, -த, -து -இல், -இன்
99	𑌑	-	-ra, -ru	-ர, -ரு, -ற, -று
123	𑌒	-	-yar, -yin	-யர், -யார்
344	𑌓	ūr-ar	-	important sign with clitics
343	𑌔	ūr-il	-	important sign with clitics

## Learn through pun

Following are an indication of the pun that abounds in Indus script, which is termed as the “rebus principle”. Of course, it only makes sense if your language is close to ancient Dravidian. For deeper understanding you may have to refer to some of the sign values below this in the section on “Syllabic development”. We only sketch a few, but the Indus script syllabary abounds in such pun. The reduction of number of glyphs required for a writing system for Dravidian language is very much dependent on prudently choosing glyphs that provide highest possible homophony.

M77 Sign	Glyph	Syllable	DED	Description	Tamil
298	))))	valai = vala+ai	-	) = vala+5	வல+ஐ=வலை
	Right-parenthesis is “vala” (curved as well as right) in Tamil and “vala” + “ai” = “valai”. “vala” is curve, as well as “right”, which fits well with description of right parenthesis. This is further explained by a pun statement shown in the next row.				
62	(ஐ)	valai-kanni	5379	scabbard fish with fang-like teeth	வாளை மீன்
	The fish “vālai” is known as the scabbard fish that has sharp teeth. A nice tooth is drawn at the top to elucidate the learning. This explains that the parenthesis sign (299, 287) carry the phonetic value “valai”				
295	)ஐ	eri-valai	902	Another sharp tooth fish	ஏரி வாளை (மீன்)
	A fresh water shark, <a href="#">Wallago attu</a> , also known “eri-valai”, a pun again on the word with rebus equation: “vālai” ≈ “valai”. The prefix “eri” comes from “two” or “iru”, leading to one more rebus equation: “iru” ≈ “eri”.				
63	(ஐ)	kanni-pori-valai	-	Trapping of birds	கன்னி-பொறி-வலை
	This learning tablet defines the phonetic value of fish as “kanni” and the bird as “puri” by defining it through a polysyllabic pun as “kanni-pori” with a parenthetic “valai”. The “kanni-pori” in Tamil is “trapping”.				
64	))((	valai-kanni	-	The clitic reverses reading order	கன்னி-பொறி-வலை
	The clitic sign 64 reverses the reading order to the right of it. This learning script defines that.				
376	ஐ	pal	-	teeth	பல்லு
	A teeth is indicated by the protruding teeth effect, just like in the fish teeth.				
57	இரூம்பு	irumpu	486	iron	இரும்பு
	Now we have triple pun: iru-pu (two insects) ≈ erumpu (ant) ≈ irumpu (iron)				
181	கொட்டு	kottu	2065, 2064	pour (sting)	கொட்டு
	We can see pincler claws are indicated to show “sting” and “pour” are homophones in Dravidian “kottu”. The stinging honey-bee also is supposed elucidate connotations of “honey” that pours (kottu) from the beehive.				
393	பல்லர்	palla-ar	3986a, 1045, 4016	palla, pallar	பல்லர் (பள்ளம்)
	The sign 391 “palla” (see sign list below) is indicated here by putting it upside down in a hole (pallam) by creating the pun.				
310	விலவில	vila-vila	5424	tremble with fear	விலவில
	This cognates with “vavvāl” (DED 5370), probably a long-tailed fruit bat, with an eerie shivering scene that it creates.				

303	)	iṭa,	432	cleft, gap, split, crack open , slit, breach, chasm	இட
Also works as “iṭaveli” ≈ “iṭai-valai”.					

## Syllabic development
