

Macro structures in Indus script

S.K.Venkatesan

The logo-syllabic Indus script has been deciphered using Dravidian Etymology Dictionary. Complete list of signs of the Mahadevan corpus deciphered are described in the [other document](#). A threshold point has been reached now that one is able to not only read all the lines of text but also understand them with clear-cut semantics.

Apart from the decipherment we are also able to provide a picture of the production activities in Indus Valley as reflected in the text.

Glyphs grouped under categories

A word of caution must be mentioned here: since these are primarily syllables, their actual use in a text may not correlate to below category.

The Indus barter exchange system

We only illustrate the key points here. The local barter happens in the undocumented unorganized sector at the cross-roads (𑀲𑀺), in what is termed as “cantai” (சந்தை) in modern Tamil. The exchange is abstracted by the symbol 𑀲𑀺 and the barter mediated by 𑀲𑀺 (maran?), who is usually qualified by great reliable ancestary (flowery self-praise by the system). The exchange is done by symbol 𑀲𑀺 (kol, the dagger of exchange) and 𑀲𑀺 (an abstraction of the cross-road, 𑀲𑀺). Most of the script pertains to official barter transactions of Indus, which are really instructions of transporation mode and the origin/destination. The clitics like 𑀲𑀺 (M77-99) orchestrate the sentence structure of the lines of the seals. An highly compressed form of information exchange mechanism is enabled by the drsastic use of poly-semantic logo-syllabic script with each of these logo-syllables having many semantic possibilities with high degree of pun. This is so deeply wedded to Indus culture and mode of exchange that the deciphering of it has taken so long. The skills of bronze-age artisans is in ful display here with those hundreds of poly-semantic logo-syllables crafted and designed with care to work in those small spaces available in the seals. What is interesting that the deeply mysterious swastic symbol (M77-148) is now understood as the mundane:

𑀲𑀺 = 𑀲𑀺 + 𑀲𑀺 = cērukoḷ = சேர்ந்துகொள்

i.e., declaration of an important exchange, which is usually followed by drum beats 𑀲𑀺. The drum beats are also a way to invite more people to the square for exchange (at cross-roads).

Relative volume of trade

We consider the absolute occurance numbers in the text and also the association to the right of sign no. 99 𑀲𑀺. If we assume that what procedes (to the right of) sign. 99 𑀲𑀺 is the sender of goods then we get the following data:

Glyph	Description	No. occurrences	Forward transactions
𑀲𑀺	Cattle	369	290
𑀲𑀺	Agriculture	225	18
𑀲𑀺	Ivory	182	82
𑀲𑀺	Carpentry, Bronze work	134	6
𑀲𑀺	Honey	44	18
𑀲𑀺	Cross-road	41	8
𑀲𑀺	Elephant herding?	15	10
𑀲𑀺	Tailoring	14	4

Among 634 occurrences in IVC text with sign no. 99, assuming that what comes to it's right is the region that is sending commodities to the other regions, we can summarize that cattle and
